– I like to sloving onlinejugged problem. I already slove 300 | problem in Beecrowd

## PROJECTS

### School Management System

Laravel and Ajax

A **School Management System** with Laravel and Ajax. It includes a range of pre-built components and functionality that can be customized to suit the needs of individual projects. *Dashboard, User and Setup Management, Student Management, Marks Management, Employee Management*. Overall, the school management system is designed to be a comprehensive solution for managing a school's daily operations. The system can help streamline administrative tasks, provide quick access to important data, and ensure that the school is running smoothly and efficiently.

### Laravel-Vue js Inventory

Laravel and Vue js

This **Laravel Vue Inventory** was developed with *Dashboard, POS, Category, Product, Stock, Order, Employee, Supplier, Customer, Expense, Salary, VAT Management*. Overall, these features can be combined to create a comprehensive **Laravel Vue** project that provides users with a complete set of tools for managing their business operations.

### Advance Ecommerce

Laravel and Ajax

This Laravel **multi-language ecommerce website** is the ultimate platform for businesses looking to sell products online. With an intuitive dashboard, customizable settings, and advanced features like a slider, brand management, catalogue with multi-level categories, product management, pages, and coupon management, our platform has everything you need to launch a successful online store.

### Learning Management System

Laravel

The project aims to create a **Learning Management** blog website that will provide informative and engaging content to its users. The website will have various features, including a dashboard, banner, categories, posts, upcoming posts, achievements, testimonials, contact, subscriber, follow, and settings. These features will ensure a seamless user experience for visitors and help the website's admin or author to manage the website efficiently.

### Inventory Management

Laravel

This inventory management system is built with Laravel and includes a user-friendly dashboard for easy navigation. This system includes a point of sale (POS) feature to streamline sales transactions and inventory updates. Categories, brands, and products can be easily managed and organized within the system. Employee and salary management, order and cost monitoring.
